Halcrow offers a wide range of courses covering the theory and practice of hydrology, hydraulics and flood risk management as well as the use of GIS. Our courses cover numerous software tools including ISIS, TUFLOW and SANDS and have been specifically developed to:

- Provide cost-effective, well-structured and practical training
- Be run by a highly knowledgeable and specialist team
- Be flexible and tailored to your specific needs
- Be informal with a focus on interactive work in small groups

Our tailor made courses can be specifically designed to take into account the skills, experience and knowledge of those wishing to attend. The practical based work can also be carried out using your existing data, which provides an aspect of familiarity and allows the course attendees to gain a better understanding of their work. Training courses can be run at your office or at one of our 80 offices worldwide.

Visit www.halcrow.com/training to book online or contact Alastair Sheppard and Vijay Jain at technicaltraining@halcrow.com or on 0845 094 7990.
